Introducing the new HV fans

Final preparations are underway for our showing at the Future Propulsion Conference, the annual two-day event which brings together industry and academic experts in the powertrain development field.

This year we are excited to present the new range of high voltage brushless drive fans designed to meet demands for greater energy efficiency in electric vehicles powered by high voltage batteries.

Available in 800W and 2kW formats, as with other fans in the SPAL brushless family, the fully sealed brushless drive units meet IP6K9K specifications and are resistant to corrosion and water ingress.

Smart controlled with CAN, PWM and LIN versions available as well as HVIL optional, the built in diagnostic and safety features enable the fans to maintain performance in challenging environmental conditions while delivering 40,000 hours of operation.
