Superior Cooling Keeps Stuart Drifting Along

It's the height of the drift racing season and pro-drifter Stuart Egdell is flying the flag for the new set-up of SPAL high-performance brushless fans he recently had installed; that keeps his vehicle running smoothly in the heat of the summer, whether it's on the starting grid or coming off a corner sideways at full throttle.

We sat down with Stuart to talk about his experience with SPAL fans on the circuit and he said he was blown away by the difference SPAL fans made. The superior quality and capability of SPAL brushless fans to deliver maximum cooling no matter the ambient temperature was revealed to Stuart when he was one of the few drivers able to compete in Croix En Ternois, France as the thermometer hit 45° while all around him other drivers were pulling out of the race with severe overheating issues.
